

ATIP Shield & PCI DSS Assessment Tool

PLATFORM FEATURE UPDATE

Two important new features were added to the Adlumin Platform. ATIP Shield enhances the platform's threat intelligence capabilities, and the PCI DSS Assessment tool allows organizations to further automate compliance requirements using Adlumin.

ATIP Shield

ATIP Shield is Adlumin's publicly accessible threat intelligence feed, containing IP address indicators of compromise sourced from several industry-leading private sector companies and US government entities. The ATIP Shield feed is updated every 2 hours and is intended for automated ingest by firewalls, IDS/IPS, and other devices that have the ability to import external IP lists. Integration documentation for select vendors is included in the platform. The feed is available at: https://shield.adlumin.com/ip_indicators.txt

PCI DSS Assessment Tool

The new Payment Card Industry Data Security Standard (PCI DSS) assessment tool provides multiple Self-Assessment Questionnaires (SAQ), which allow users to assess and track their overall compliance level with the PCI Data Security Standard. In the PCI DSS assessment dashboard, each SAQ pertains to a particular type of merchant or business that uses or stores payment card data. The user must determine which SAQ type(s) apply to their organization, at which point they can then proceed with the assessment. The PCI DSS assessment tool can be found under the *Reports* menu.
