CISA Automated Indicator Sharing (AIS)
PLATFORM FEATURE UPDATE

Adlumin's Threat Intelligence Scanner now includes threat intel feed data from the Cybersecurity and Infrastructure Security Agency (CISA).

CISA, which operates under the authority of the Department of Homeland Security, builds the national capacity to defend against cyberattacks. They also work with the federal government to provide cybersecurity tools, incident response services, and assessment capabilities to safeguard the '.gov' networks that support the essential operations of partner departments and agencies.

Adlumin is now a participating member in CISA's Automated Indicator Sharing (AIS) program. AIS enables the real-time exchange of machine-readable cyber threat indicators and defensive measures to help protect participants of the AIS community and ultimately reduce the prevalence of cyberattacks. The AIS community includes private sector entities; federal departments and agencies; state, local, tribal, and territorial (SLTT) governments; information sharing and analysis centers (ISACs) and information sharing and analysis organizations (ISAOs).

By incorporating AIS feed data, Adlumin further strengthens its leading-edge threat intelligence technology, ensuring that our customers are able to detect and respond to threats in real-time.

You can access this new feature under *Threat Intel* on the left sidebar menu.
