

Methods for Ingesting Office 365 Log Data

PLATFORM FEATURE UPDATE

Customers with an existing Cloud App Security subscription can utilize the Adlumin Collector's built-in functionality, while those running Azure Active Directory can take advantage of our latest API integration.

With our new Office 365 Management Activity API integration, Adlumin is capable of receiving log data from Azure Active Directory. The Office 365 Management Activity API provides information about various user, admin, system, and policy actions and events from Office 365 and Azure Active Directory activity logs.

Adlumin further enhances this data, giving customers greater security and compliance-monitoring capabilities.
