

Office 365 Report

PLATFORM FEATURE UPDATE

Adlumin is pleased to announce our enhancements to the Office 365 report. Combining the recent Azure API integration along with Adlumin's telemetry collection service, the following sections have now been added to the report:

Office 365 Detections

This feature reports critical, high, and medium detections involving Office 365 software by giving you a record of those events in one place.

Foreign Country Access

This feature shows the country and event details of account/system access events based on your organization's home country.

Logon Activity Summary

This feature shows an overview of the accounts with the most logins and most failed access events to give you insight into trends. Additionally, there is a list of event details on failed logins.
