

Trend Micro Worry-Free Business Service (WFBS)

PLATFORM FEATURE UPDATE

Trend Micro™ Worry-Free™ Business Service (WFBS), the endpoint security service with a cloud-based management console, is now integrated into the Adlumin platform. Once enabled, Trend Micro WFBS detection logs are automatically imported into the platform every 24 hours. Detection logs can be filtered and contain details about the action that was flagged by Trend Micro (e.g., virus, spyware, WTP, URL filtering, behavior monitoring, device control, application control, machine learning, network virus, etc.).

The subscription to the Trend Micro log API is automated by Adlumin once the integration is enabled.

You can find this functionality under *Devices > Endpoint Security > Trend Micro WFBS*.
