Custom Reports
PLATFORM FEATURE UPDATE

Adlumin users now have access to our new Custom Reports feature, which enables you to design custom reports for any device that sends log data to Adlumin.

Dashboard operators will benefit from features including:

- The ability to create reports for a device of your choice using a user-specified custom query.
- A preview feature to help you tailor your custom query and ensure that your report is capturing the appropriate and expected log data.
- On-demand generation of your custom reports with the ability to limit the report content to a specific time period.

Additional functionality will be added over the course of the coming weeks based on user feedback. The Custom Reports feature can be accessed in the *Reports* menu on the navigation bar.
