

Cisco Umbrella

PLATFORM FEATURE UPDATE

Adlumin now integrates directly with Cisco Umbrella. Umbrella is Cisco's cloud-based secure internet gateway platform that provides multiple levels of defense against internet-based threats. Umbrella integrates secure web gateway, firewall, DNS-layer security, and cloud access security broker functionality to protect systems against threats.

Utilizing Umbrella's Amazon S3 logging capabilities, you can import your Umbrella logs into the platform. Adlumin will automatically configure an S3 bucket unique to your tenant where Umbrella logs will be stored, fetched, and parsed in real-time.

Cisco Umbrella can be found under *Devices > Network Security > Cisco Umbrella*.
